

```
/**
  USAGE: ToDoList()
  Embed a TODO-list into a page. The TODO list allows users to create new items, assign them to other
  users, and set deadlines.
  Items that are due are highlighted in yellow, items passed due are shown in red, and completed items
  are struck out. The TODO-
  list can be added to any page. The information of the TODO-list is stored as a page property.
```

NOTES:

- * only 1 TODO-list can be embedded per page
- * this template requires the DekiAPI script extension
- * this template requires the jQuery script extension

CHANGE HISTORY:

1.0

- * initial version

1.1

- * show error message if dekiapi or jquery extensions are missing
- * verify if user is logged in or not; if not, disable add & update controls

1.2

- * allow custom user list to be passed in
- * publish changes to a channel

```
***/
```

```
var userlist = $userlist;
var publish = $publish ?? 'default';
var message = $message ?? {};
var allowed;
```

```
if(userlist) {
```

```
  // convert list of names to list of user objects
```

```
  let userlist = [
    (u is map) ? u : wiki.getuser(u)
    foreach var u in userlist
  ];
```

```
  let allowed = [ string.tolower(u.name) foreach var u in userlist ];
```

```
} else if(site.usercount <= 500) {
```

```
  // get list of users from site
```

```
  let userlist = site.users;
```

```
}
```

```
// check if required extensions are installed
```

```
